

Share of charges and subsidies in net turnover Infrabel

The infrastructure charges and the operating grants are an important part of the net revenue of the infrastructure manager. In the previous years, there was an evolution of the share of charges from 58% in 2015 to 72% in 2019, while subsidies evolved from 19% to 9%. COVID changed this repartition completely: in 2021 only 33% of the net turnover came from charges, while subsidies provided 45%. In 2024, this repartition was more or less the same: 35% came from charges and 41% came from subsidies.
